(54) Title: **CORKSCREW**

(57) Abstract: The present invention refers to a corkscrew comprising a handgrip (1), a screw (2) associated to the handgrip (1) by means of a first pivoting connection (3), and an arm (4, 4') comprising first abutting members (5, 5') and associated to said handgrip (1) by means of a second connection (21) that enables said arm (4, 4') to rotate. Said arm (4, 4') being further capable of performing a second movement relative to said handgrip (1). The corkscrew is characterized in that it comprises elastic means (10) that are capable of affecting at least said second movement of said arm (4, 4') in order to assist in pulling out a cork (7) from a bottle (6).
